

Greg's Message

After much celebration over the holiday season, the staff and I here at Primemovers are refreshed and ready for a busy new year. First I would like to apologise to all of those who made an attempt to view our website; there had been several delays but I am proud to announce that it is up and running and wish for all of you to take a look.

This year expect to see new promotions on our products, updates and additions to our website, and just quietly, a new vehicle is to be released in the coming months, so keep posted and you'll stay up to date.

Providing customers with top-shelf products and superior service is extremely important to us, so we encourage you all to give any feedback or suggestions to help us maintain and improve our product and service offerings. Feel free to drop in and say g'day, email or call during business hours and well do our best to take care of you.

Q & A with Michael Case 420 Skid Steer

What benefits can a Case Skid Steer bring to my business?

Case Skid Steers have proven to be of superior value when it comes to performance and reliability. Case provides its vehicles with parts and technical support globally, which is why the U.S Army makes it their choice; as it meets the demanding criteria for use in the battlefield. Versatility comes standard with Case Skid Steers.

What sets Case Skid Steer's apart from the Alternatives?

There are several reasons why anybody should purchase Case brand skid steers, including Case's superior push power, Heavy Duty Design, Easy Maintenance Access, easy to use Servo Controls, Case Care warranty and Hydrostatic ground drive just to name a few. Case's years of experience in Construction Equipment development have allowed for the refinement of these features and technologies.

Are there any Options I can add to the 420 to make it more Functional and Versatile?

Depending on the type of job, you can find your matching Skid Steer with a range of options to increase its functionality. Ride control, high flow kit, hydraulics and air-conditioning are just a few of many options should you need to customise your machine.
